Functional Safety (ISO 26262)

grade assumed - not yet confirmed

Parameter	Value	Basis
Quality grade costed	auto grade1	Sets the multiplier on test and inspection cycle times
Test / inspection multiplier	x1.80	Applied to every test and inspection operation in section 4
Test & inspection cost (2 ops)	£6.43	BGA X-Ray Inspection (inline AXI), ICT / Functional Test
Same routing at consumer grade	£3.57	The safety grade adds £2.86/part to verification
ASIL determination	NOT SUPPLIED	An ASIL comes from hazard analysis (HARA), not from a board photograph

No ASIL has been supplied for this costing, so the figures above record the quality grade that was ASSUMED rather than a safety rating this tool determined. Confirm the grade against the item safety requirement before quoting: a step up or down changes the verification cost shown above roughly in proportion to the multiplier, and can change component selection and the X-ray strategy as well.

How to read the machine rate

Rate/hr = (annual depreciation + maintenance + energy + floor + indirect + finance) ÷ effective hours, where effective hours = available hours × utilisation.

Effective hours encode the shift pattern: a lower hours-base raises £/hr and a higher one lowers it. A challenge from a supplier will target this divisor and whether depreciation is machine-only or full-cell (machine + dosing furnace + trim + robots/extraction) — state your basis when defending the number.

§7 — Should-Cost with Uncertainty

Monte-Carlo · Low confidence

Estimate (± band)	P10 · optimistic	P50 · median	P90 · conservative	Band	CV
£108.13 ± 23.2%	£84.54	£105.90	£134.68	wide	18.5%

Range reflects how well each cost driver is known (High / Medium / Low confidence). Tighten it by attaching CAD, a BOM, or logging an actual quote.

Why confidence is Low

Main band drivers: 8 rate(s) at Low confidence; tooling amortisation carries the widest per-bucket spread.

What's excluded from this unit cost

One-time NRE — tooling / die, fixtures and CNC programming — is amortised separately, not in this unit cost.

Import duty and international freight (regional table is Ex-Works).

Formal embodied-carbon reporting (figures are indicative cradle-to-gate — replace with supplier EPDs).

[WARNING] Low OEE on "SMT Placement & Reflow"

Finding	OEE of 82% is below the 90% benchmark. Every 5% OEE improvement on this operation saves ~£0.710/part.
Impact	Medium · up to 1% potential saving
Action 1	Implement SMED (Single-Minute Exchange of Die) to reduce changeover losses
Action 2	Schedule preventive maintenance to reduce unplanned downtime

§12 — Cost-Reduction Opportunities (ranked by saving)

4 opportunities · combined £7.35/part (~7%)

Ranked on money per part against this costing. The combined figure is the root-sum-square of the top three, capped at 40% — overlapping actions do not save twice, so the column is deliberately not summed.

#	Category	Action	Why it is on the list	Save/p art	%	Timeframe	Risk
1	Design & Geometry	Design Review for DFM Compliance	Formal DFM review with manufacturing engineering to identify part features that increase cost without functional benefit.	£5.41	5.0%	Quick Win	Low
2	Quality & Inspection	Right-Size Inspection and Test	Inspection/test operations carry 6.0% of part cost as separate steps. Capable processes earn reduced inspection — that is what capability data is for.	£3.86	3.6%	Medium Term	Low
3	Commercial & Sourcing	Raw-Material Price Indexation Clause	With material at 69.5% of cost, the quote embeds the supplier's hedge against metal/resin volatility. An index-linked clause removes that risk premium from the piece price.	£3.24	3.0%	Quick Win	Low
4	Commercial & Sourcing	Annual Volume Re-Commitment for Better Pricing	Provide 12-month rolling volume forecast to supplier to secure better unit pricing and tooling amortisation.	£3.24	3.0%	Quick Win	Low
